

## **Golden Arrow Resources Commences Reverse Circulation (“RC”) Drilling Program**

Golden Arrow Resources has commenced a reverse circulation (“RC”) drilling program and expects to complete up to 1,000 metres in six holes by the end of September. In addition, the Company has initiated preliminary metallurgy testing on material from the trenches. Results from both parts of the program will be used to evaluate the Project’s potential

*An historic mineral resource estimate<sup>1</sup> of 427 million tonnes averaging 0.43% copper equivalent based on >29,000 metre drill database outlines the existing mineralization and endorses the project's potential.*

*Newly-consolidated large property and database provides opportunity to delineate significant resources in area of historic work, and identify new mineralized zones on the property*

*Excellent infrastructure supports future reasonable development timelines and costs*

*Close proximity to GRG's Indiana Au-Cu project provides the opportunity for synergy in exploration and development*
